

# Preventive Maintenance Service Plans

---

F&P GENERATOR now offers preventive maintenance service plans for all major brands of industrial standby generators. The service plans described below are for F&P GENERATOR CUSTOMERS, in accordance with the appropriate Service Manual specifications. For models produced by manufacturers other than GILLETTE GENERATORS, the manufacturer's preventative maintenance schedule will be followed according to the proper service specifications.

	• Unit Cleaning	• Fuel Conditioner	• Customer follow-up
Yr 4 Includes:	• 21 Point Inspection	• Oil Change	• Oil Filter & Fuel Filter
	• Unit Cleaning	• Fuel Conditioner	• Coolant Change
	• Air Filter	• Replace Belts	• Replace Hoses
	• Customer Follow-up		

---

## Optional Services

*\*\*Options will be available to purchase at anytime during the contract period.*

- 1.) **Load Bank Testing** Using a Load Bank tester which simulates a load, the generator will be tested to see if it is producing power to specifications (standard test is for 1 hr)
- 2.) **Fuel Polishing** Cleaning of valuable fuel source to ensure proper operation of generator unit.
- 3.) **Additional Visual Inspection and Run Test** Offering that extra insurance that a unit is ready to deliver. Customers set the desired frequency. (Ex. Monthly, Quarterly, Bi-annually)

## WHY is fuel polishing needed?

Fuel stored for 6 months or more will degrade naturally, accumulate water from condensation, and grow bacteria (among other things). Many things can accumulate inside an unused diesel tank causing the diesel to turn to sludge. Stagnate diesel can become an unreliable fuel source creating an unreliable generator power source

We can provide you a comparative preventive maintenance service plan quote to fit your need no matter how large or small your generator might be.
